

everRun® for Healthcare

“With the key elements for this medical institution being space, installation cost, and high reliability, we think that fault tolerant servers will be an institution standard.”

- Hiro Satomi, Ohta General Hospital

Technology has become an integral component to patient care. With electronic records and medical imaging systems playing a central role in modern patient care, downtime to these systems can be risky and dangerous.

This is why healthcare providers around the globe rely on Marathon's everRun® application availability software to ensure always-on availability of both patient care and business applications.

Major hospitals, clinics and healthcare networks depend on Marathon to prevent downtime to critical applications, from imaging and electronic records to email and billing, and the building and security systems that run physical facilities.

And with Marathon's real-time validation and automation capabilities, organizations can focus on the health of patients and maintain a healthy business.

BELFAST CITY HOSPITAL ADVANCES CANCER TREATMENT

Belfast City Hospital runs an internationally recognized cancer research and treatment program that serves as a regional center of excellence in Northern Ireland. everRun protects the Oncology Center's state-of-the-art patient care system from downtime or data loss, even during site-wide disasters, giving cancer units around Northern Ireland around-the-clock access to patient data.

J. KNIPPER GIVES PHYSICIANS ALWAYS-ON ACCESS TO PRODUCT INFORMATION

Major pharmaceutical and biotechnology companies use J. Knipper's marketing and warehousing management applications to serve their customers around the clock, without downtime. everRun solutions prevent downtime and data loss for the company's order fulfillment, sales and reporting applications, letting physicians order products and access information whenever they need it.

MARATHON EVERRUN HELPS HEALTHCARE BUSINESSES USE MARATHON EVERRUN TO:

- Protect patient care from impact of data loss or downtime
- Comply with data integrity and protection regulations (HIPAA, JCAHO)
- Ensure availability of EMR/EHR and PACS systems for patient care
- Operate more efficiently with real-time validation and automated responses
- Protect billing and back office applications from data loss and outages

WHY DO SO MANY HEALTHCARE PROVIDERS RELY ON MARATHON TO KEEP THEIR APPLICATIONS ALWAYS-ON?

Marathon's preventative approach to application availability focuses on preventing

downtime rather than trying to recover from failures after they happen. everRun software protects the entire application environment with transparent redundancy, real-time validation, and automated response to failures. It delivers a single, unified and resilient environment for running Windows applications without downtime or data loss.

As experts in application availability, we continually apply what we learn from our more than 3,000 customers to our next-generation application availability software and services. We support applications in the most demanding industries and in environments with limited to no IT resources – consistently delivering solid reliability that our customers count on.

Our innovative everRun software delivers unmatched resiliency and simplicity. Forget about deploying and managing separate, siloed solutions for data, network, and storage availability – everRun delivers a *single operating environment* with unified and resilient resources for application processing. Better yet, this underlying availability environment is completely transparent to the application, so you do not need to modify applications or write complex scripts to make it work.

In a time of increasing IT complexity and “always-on” expectations, Marathon delivers always-on application availability that is simple, reliable and resilient.
