

Marathon everRun™ One Design & Integration Services

Design & Integration

Marathon delivers Consulting, Training and Technical Assurance services for the most demanding application availability environments. The **everRun™ One** service portfolio is built on the solid foundation of expertise and excellence that comes with being an industry leader.

Our Design and Integration Services help you maximize the performance of your Marathon-protected infrastructure. Our experts work with you in a highly customized manner, to meet your specific requirements for availability, disaster recovery, and business continuity.

Our knowledge and proven track record in continuous- and high-availability for Windows® systems helps you migrate from clusters, implement a disaster-tolerant SplitSite® environment or augment the capabilities of other technology services providers.

MIGRATE TO MARATHON

Whether you are migrating from clusters or establishing an applications availability solution for the first time, we will work with you to plan and design the right Marathon configuration. These services include:

- Planning and design for cluster migration
- Developing a migration strategy focused on maximizing both availability to users and your investment in existing infrastructure
- Network and storage design assistance for Marathon environments
- Qualification of servers and storage connectivity

ENSURE DISASTER TOLERANCE

Marathon's patented SplitSite technology drives Recovery Time Objective (RTO) and Recovery Point Objectives (RPO) to zero with continuous operation and no data loss through a disaster. SplitSite technology lets you geographically separate the redundant servers in Marathon configurations for complete protection against site-wide disasters. Marathon availability experts will design, implement and support a disaster-tolerant environment including a highly available network, storage system and infrastructure.

These services include:

- Design and implementation of disaster-tolerant networking between sites
- Design and implementation of storage architecture for complete data integrity
- Placement and connectivity of redundant quorum servers for fault and disaster detection

MAXIMIZE AVAILABILITY AND PERFORMANCE

Performance concerns quickly become availability concerns, often with serious implications on your business. Our technical staff helps you avoid these consequences and achieve optimal results for your Windows applications through comprehensive performance testing and system tuning. Indeed, we are relentless in helping you meet or exceed your performance objectives while running in a Marathon-protected environment.

WORLDWIDE HEADQUARTERS

Marathon Technologies Corporation
295 Foster Street, Littleton, MA 01460

Fax +44 (0) 1344.706.242
Email: emea@marathontechnologies.com
Web: www.marathontechnologies.com

Marathon's high availability expertise goes beyond server and blade configurations to include all aspects of Windows infrastructure availability, such as application performance, networking and storage design.

EXPECT FULL ACCOUNTABILITY

Every Marathon technology services engagement includes a written scope of work detailing project goals, timeline and milestones. Each project also includes a written summary of all procedures, testing results and recommendations for improvement.

All projects are fully supported by Marathon's highly trained technical support team, which has the industry's most in-depth expertise in availability for Windows environments. These highly trained professionals have designed, integrated and implemented fault-, failure- and disaster-tolerant Windows environments for leading enterprises in a wide range of industries such as manufacturing, broadcasting, public safety, financial services and gaming, where downtime is simply not acceptable.

RUN WITH MARATHON

Marathon's **everRun** product family represents a dramatic breakthrough in application availability, moving the market past high availability and continuous availability solutions to what Marathon calls "Infinite Availability™".

Founded in 1993, Marathon Technologies has 12 patents, 65 partners and 5,000 licenses shipped worldwide.
